

LIGHTED TOY FOR PETS

Abstract Of The Disclosure

A toy comprises generally spherical translucent housing having an
5 inner cavity and at least one opening positioned to provide an outlet from the
inner cavity, a power source positioned within the housing, an electrical circuit
connected to the power source, a light source connected to the power source
through the electrical circuit, and a switch connected in the electrical circuit,
wherein an amount of a scent-producing material is positioned in the inner
10 cavity of the housing so as to release a scent through the outlet opening.
Also included is an entertainment device including a housing having a cavity
and at least one opening positioned to provide an outlet from the cavity, a
power source, an electrical circuit, a stimulator selected from a light source, a
sound source, and a combination thereof, the stimulator connected to the
15 power source through the electrical circuit, and a switch connected in the
electrical circuit.
